

For Immediate Release

Solibri Introduces Solibri Model Checker v7, Delivering Superior Performance and Adding Innovative QA/QC Capabilities for the AEC Community.

Helsinki, Finland, and Scottsdale, Arizona, September 28th, 2011

Solibri, Inc., the leader of Model Checking technology for BIM QA/QC (Quality Assurance/Quality Control) and BIM analysis, announces the immediate availability of a new major version, Solibri Model Checker v7. This version includes significant enhancements to our already friendly user environment, new and innovative capabilities for the BIM QA/QC process and workflow, as well as remarkable gains in processing power and performance.

Improved QA/QC Process, Workflow and Effectiveness – Model Checking for Quality

Innovation and new QA/QC capabilities introduced in Solibri Model Checker v7 address two central aspects of BIM Quality control: support for implementing organization level QA/QC processes and best practices for consistent quality, and unsurpassed QA/QC process performance.

Solibri Model Checker v7 supports the implementation and enforcement of organization level QA/QC processes by introducing role definition and centrally managed (or shared) resources. These include Rulesets, ITOs, and classifications enabling design and construction professionals to effectively carry out their day-to-day work based on their own organizations best practices to attain high and consistent BIM quality.

“Centrally managed resources and the introduction of roles elevate QA/QC to an entirely new level. These enhancements, combined with the highly improved performance and streamlined role-based user interface make Solibri Model Checker v7 very effective, and an easy to use QA/QC solution.” states Mr. Heikki Kulusjärvi, CEO of Solibri, Inc.

“We are committed to continuous performance gains and delivering the most versatile capabilities for the QA/QC process. We are excited and proud to introduce our latest version of Solibri Model Checker with many enhancements based on customer requests, as well as new innovations by Solibri” continues Mr. Kulusjärvi.

About Solibri

Solibri is the leader in BIM QA/QC, providing out of the box tools for BIM validation, compliance control, design process coordination, design review, analysis, and code checking. Solibri’s corporate mission is to develop and market quality assurance solutions that improve the quality of BIM-based design and make the entire design and construction process more productive and cost effective.

Solibri’s customers include major building owners, construction companies, architects and engineering firms in 64 countries.
